

## **AMENDMENTS TO THE CLAIMS**

The following listing of claims will replace all prior versions and listings of claims in the application.

### **LISTING OF CLAIMS**

1. (Currently Amended) A sanitary system, the system comprising:
  - a toilet having a flush tank for storing a source of flush water; and
  - a spout being in fluid communication with the flush tank and having a first open end coupled to the flush tank, the spout further including a second open end opposite the first open end;
  - the spout coupled to the flush tank for rotation about a generally vertical axis between a stowed position and an access position; and
  - the second end being ~~rotatably~~ rotatable relative to the first end about a generally horizontal axis between a fill position and a ~~drain~~ drainage position such that the source of flush water is drained from the flush tank in the drainage position.
2. (Previously Presented) The sanitary system of Claim 1, wherein the spout includes a first component and a second component, the second component coupled to the first component for relative rotation about the generally horizontal axis between the fill position and the drainage position.
3. (Previously Presented) The sanitary system of Claim 1, wherein the spout is coupled to the flush tank for rotation about the generally horizontal axis through at least approximately 180°.

4. (Currently Amended) The sanitary system of Claim 1, wherein the second end is rotatable relative to the first end about the generally ~~horizontal~~ vertical axis through approximately 90°.

5. (Previously Presented) The sanitary system of Claim 1, wherein the second end includes an opening, the opening facing generally upward in the fill position and facing generally upward in the fill position and facing generally downward in the drainage ~~portion~~ position.

6. (Previously Presented) The system of Claim 1, wherein the system further includes a bench and wherein the spout is disposed within the bench in the stowed position and the spout extends from the bench in the access position.

7.-19. (Cancelled)

20. (Currently Amended) A sanitary system comprising:  
a toilet having a flush tank for storing a source of flush water; and  
a spout including a first open end and a second open end, the first open end in fluid communication with the flush tank, the second open end rotatable relative to the first open end about a generally horizontal axis for draining the source of flush water from the flush tank.

21. (Previously Presented) The sanitary system of Claim 20, wherein the second open end is rotatable between a first position and a second position such that the second open end faces generally downward in the second position.

22. (Previously Presented) The sanitary system of Claim 21, wherein the second open end faces generally upward in the first position.

23. (Currently Amended) The sanitary system of Claim 20, wherein the second open end is rotatable to a position substantially below the flush tank for draining the flush tank in a drainage position ~~under the power of gravity~~.

24. (Previously Presented) The sanitary system of Claim 20, wherein the spout includes first and second components coupled at a joint.

25. (Previously Presented) The sanitary system of Claim 20, wherein the second open end is rotatable to a position below the first open end.

26. (Previously Presented) The sanitary system of Claim 20, further comprising a cap removably secured to the second open end.

27. (Previously Presented) The sanitary system of Claim 20, wherein the first open end is oriented generally upward.

28. (Currently Amended) The sanitary system of Claim 20, wherein a generally vertical axis is defined through the first open end and wherein the first open end is rotatable ~~relative to the flush tank~~ about the ~~the~~ [[a]] generally vertical axis.

29. (Previously Presented) The sanitary system of Claim 28, wherein the generally horizontal axis intersects the generally vertical axis.

30. (Previously Presented) The sanitary system of Claim 1, wherein the second open end faces generally downward in the drain position.

31. (Previously Presented) The sanitary system of Claim 1, wherein the second open end is above the first open end in the fill position.

32. (Previously Presented) The sanitary system of Claim 1, wherein the first open end faces generally upward.

33. (Previously Presented) The sanitary system of Claim 1, wherein the spout includes first and second components rotatably coupled at a joint.

34. (New) The sanitary system of Claim 5, wherein the second opening is disposed below the flush tank in the drainage position.

35. (New) The sanitary system of Claim 20, wherein the second open end is rotatable to a drainage position below the flush tank.
